Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 4-6,8,10-12,14,16,18-22,24 and 26-28 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 28-40 of U.S. Patent No. 5,972,712. Although the conflicting claims are not identical, they are not patentably distinct from each other because both teach methods of evaluating the clotting characteristics of blood.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 4-6,8,10-12,14,16,18-22,24 and 26-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baugh (USP 5,314,826) in view of Hanahan et al.(USP 4,329,302).

Baugh teaches a methods for the evaluation of clotting characteristics of platelets. A sample is dispensed into a test cell. An activating agent such as kaolin is

Art Unit: 1743

added. The method also includes reciprocating the plunger to determine the clotting properties of the blood.

Baugh is silent to the claimed "1-O-alkyl... phosphorylcholine" (e.g. AGEPC hereafter) reagent. Hanahan et al. teach AGEPC is a potent platelet activator. It would have been within the skill of the art to modify Baugh (USP 5,314,826). in view of Hanahan et al. (USP 4,329,302) and use AGEPC to gain the advantage of high platelet activation.

Baugh in view of Hanahan is silent to the claimed concentrations of AGEPC.

The court decided In re Boesch (205 USPQ 215) that optimization of a result effective variable is ordinarily within the skill of the art. Selection of the optimal concentration of a known reagent having well known properties, such as platelet activation, is a result effective variable.

It would have been within the skill of the art to further modify Baugh and use the AGEPC in the claimed concentrations of 0-2.76 micrograms and/or 0-150nm.
